1-Responsibilities and Achievements of

Senior IT Service Management Process Manager

Software Quality & Process Engineering –Mercedes-Benz AG 11.2023 – 07.2026

- Governed enterprise-wide IT Service Management processes supporting globally distributed business-critical Product Data Management (PDM) services.
- Led 24x7 Major Incident Management as Manager on Duty (MoD), coordinating Development, Cloud, Infrastructure, Product and Vendor teams during high-priority service disruptions.
- Drive enterprise IT governance by standardizing Incident, Change, Problem and Request Management processes across multiple products and support organizations.
- Designed, optimized and maintain IT Service management workflows, approval processes, assignment models and operational procedures aligned with ITIL4 best practices.
- Performed impact analysis and risk evaluation by utilizing CMDB relationships to improve Change Management quality and operational decision-making.
- Developed executive KPI reporting, operational governance metrics and service health dashboards for management and stakeholders.
- Led Root Cause Analysis (RCA) activities and coordinate long-term corrective actions following major production incidents.
- Collaborated with global architecture, platform engineering and DevOps teams to continuously improve operational stability and service maturity.
- Defined governance standards, operational documentation and process improvements to increase service quality and platform consistency.
- Coordinated cross-functional communication between technical and business stakeholders during critical incidents and service recovery activities.
- Supported enterprise cloud operations running on Kubernetes-based environments, ensuring alignment between ServiceNow processes and operational execution.
- Contributed to continuous process optimization initiatives by identifying automation opportunities and eliminating operational inefficiencies.

2-Responsibilities and Achievements of

IT Service Management Process Manager

Software Quality & Process Engineering– Mercedes-Benz AG || 04.2023 – 11.2023

- Standardized enterprise ITSM processes through ServiceNow platform configuration and workflow optimization.
- Designed and documented global ITIL4 operational standards for Product Data Management services.
- Implemented governance models to improve consistency across Incident, Change, Problem and Request Management processes.
- Configured ServiceNow operational processes including approval workflows, assignment structures and service procedures.
- Supported ServiceNow platform administration by maintaining organizational structures, user groups, roles and operational configurations.
- Led Target Operating Model implementation initiatives for Product Data Management services.
- Coordinated external support partners and internal technical teams to ensure high-quality service delivery.
- Worked closely with Development, Infrastructure and Product teams to improve operational efficiency through process standardization.

3-Responsibilities and Achievements of

IT Service Management Specialist

Global Tech-Hub – Mercedes-Benz AG || 11.2021 – 04.2023

- Supported enterprise ServiceNow platform operations for global business applications.
- Participated in the implementation and continuous improvement of ITSM processes aligned with ITIL4.
- Collaborated with cross-functional teams to optimize Incident, Change and Request Management workflows.
- Assisted in ServiceNow platform configuration and operational process enhancements.
- Supported governance initiatives focused on operational excellence and service quality improvement.
- Contributed to service automation and workflow optimization initiatives across multiple support organizations.

4-Responsibilities and Achievements of

IT Change and Problem Analyst

ING || 09.2018 – 11.2021

- Configured and customized ServiceNow ITSM and Integrated Risk Management (IRM) modules to support enterprise IT governance processes.
- Designed and optimized Change, Problem, Demand and Request workflows to improve process efficiency and governance compliance.
- Customized ServiceNow forms, workflows and user interface components using platform configuration and JavaScript.
- Implemented approval workflows, assignment rules, notification mechanisms and process automation supporting enterprise Change Management.
- Collaborated with development teams to analyse business requirements and translate them into scalable ServiceNow platform solutions.
- Built operational reports and dashboards by utilizing ServiceNow data relationships to improve management visibility and decision-making.
- Led Change Advisory Board (CAB) meetings by coordinating technical stakeholders, reviewing production changes and ensuring governance compliance.
- Managed enterprise Release and Freeze Calendars to minimize production risks during critical business periods.
- Supported Internal and External IT Governance audits including SOX and COBIT compliance activities.
- Provided technical consultancy for ServiceNow and Azure DevOps usage across development teams.
- Contributed to workflow improvements, platform enhancements and user adoption initiatives across multiple IT departments.
- Participated in continuous service improvement initiatives by identifying operational bottlenecks and recommending automation opportunities.
